How to Change Your MSPCA Password using owa.mspca.org

Eric Ruthenberg - 2021-01-12 - Comment (1) - General

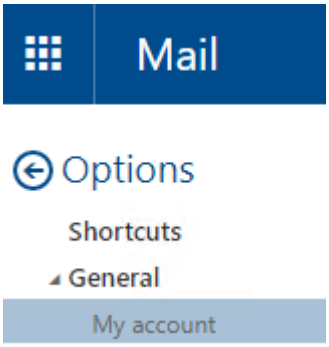

Log in to owa.mspca.org with your current username and password.

Click the Settings gear in the upper right hand corner and choose Options.

Under Options, click once on General to expand that category, if necessary.

Click on My Account.

Scroll down a little in the center pane, and click the link for "Change Your Password."

Type your current password, your new password and confirm your new password.

Click Save.

****Note**: After saving, you might need to re-enter your username and password and sign in again. You'll be notified when your password has been changed successfully.

Remember to change your saved password(s) anyplace else you might have your credentials saved. (e.g. mobile devices, web browsers, remote desktop shortcuts, etc.)
